

Illinois 4-H Safe

ENVIRONMENTAL HEALTH AND SAFETY

Illinois 4-H Safe notes are intended primarily for 4-H staff and volunteers.

HEAT ILLNESS AWARENESS

According to the CDC, during 2004-2018, an average of 702 heat-related deaths occurred in the United States annually. Children are at greater risk for heat stress because their bodies have a larger surface area per pound of weight. Youth that are vigorously exerting themselves in summer heat are at higher risk for contracting heat illness. By taking several simple precautions, people can control and/or reduce exposure to conditions that may cause heat illness.

Precautions to Prevent Heat Illness Disorders

1. Volunteers and 4-H members should acclimatize themselves to the prevailing weather conditions.
2. Always drink plenty of fluids such as water and sports drinks. During warm weather, plan to have at least one quart of water available per person per hour of the outdoor activity. Avoid caffeinated drinks.
3. Wear a summer hat with a brim and loose-fitting, light-colored, and lightweight clothing like cotton.
4. Schedule vigorous activities during coolest portions of the day and take frequent breaks on hot days.
5. If someone is feeling symptoms of heat illness, they should take a rest period in a shaded area. Volunteers or 4-H members should help find access to shade – this may be any area where the affected person is protected from direct sunlight, such as under an umbrella, a portable structure, or inside a ventilated building or vehicle.

Heat Illness Symptoms

1. Heat Stroke - sweating stops and the body fails to regulate its temperature. Victims may die if they don't receive immediate medical treatment. Characterized by: mental confusion, fainting, or seizures; hot dry skin usually reddish in color; and high body temperature.
2. Heat Exhaustion - profuse sweating results in dehydration. Characterized by: fatigue, dizziness, and nausea; pale and moist skin; and possibly slightly elevated temperature.
3. Heat Cramps - cramping thought to be due to loss of salt through sweating. Characterized by muscle spasms in arms, legs, and abdomen during or following physical activities.
4. Heat Rash - occurs under hot and humid conditions where sweat does not evaporate readily. Characterized by irritated/itchy skin with prickly feeling and small red bumps on skin.

Treatments for Heat Illness Disorders

1. Heat Stroke - call 911 immediately, soak victim's clothing with cool water, move victim to shaded and cool area, fan victim to increase cooling of their body.
2. Heat Exhaustion - have victim rest in shaded and cool place and drink fluids. Do not serve caffeinated fluids such as soft drinks, iced tea, or coffee.
3. Heat Cramps - have victim rest and drink non-caffeinated fluids.
4. Heat Rash - wash and dry skin. Wear loose clothing and keep skin dry.

If a treated victim does not recover from heat illness in a reasonable amount of time, promptly seek medical attention. Plan ahead to know how to summon medical assistance and direct emergency responders to your location or how to transport the heat illness victim to a medical service provider.

Any incidents of heat illness shall be promptly reported to the 4-H member's parent/guardian and 4-H staff.
